

NAME

RCS – [incr Tcl] Revision Control System interface.

SYNOPSIS

package require RCS

RCS *objName* [*CLASS OPTIONS*]

objName **method** [*METHOD OPTIONS*]

CLASS OPTIONS

-dir Current directory.
-refresh Background refresh rate.
-editor Editor.
-manbrowser Man page browser.
-rev Symbolic revision name (default {}).

PUBLIC METHODS

version

Return the version number. The RCS version number is returned.

help

Return the help text. Help intro is returned.

getRevision *newRev* *browseMode*

Allow user to select a revision or enter a new one. The user will be allowed to select one or more old revisions (depending on *browseMode*) or enter a new revision (depending on *newRev*). The selected revision(s) will be stored in *revSelect* and the return code will be stored in *revReturn*. Return 0 if ok or 1 if not (cancelled, etc).

METHOD OPTIONS

newRev Allow user to enter a revision (boolean, optional, default false).
browseMode Mode to set listbox into (optional, default browse).

selectFile *fileName*

Allow a user to select a file in the current directory. The *fileName* will be set in the *hlist*. Nothing will be returned. Errors will propagate.

METHOD OPTIONS

fileName Name of the file to select.
